## About me

---

Azure Cloud & DevOps Engineer, Microsoft certified (AZ-104, AZ-800, AZ-801) with the Hybrid Cloud Administrator title. Specialized in the design, deployment, and administration of scalable infrastructure in cloud-native and hybrid environments, applying Cloud Adoption Framework (CAF) best practices. I possess solid experience in automating critical processes and operations, having led the development of centralized resiliency engines and automated network validation solutions using PowerShell and Python. Focused on operational excellence, technical governance (Azure Policy/FinOps), and high-precision documentation. Currently I am a Computer Science student at UBA, which allows me to combine theoretical foundations with a mindset oriented toward complex system optimization and collaborative work.

## Professional Experience

---

### Azure Cloud Demand Hub Engineer

*ReadyMind*

October 2025 – Present

- Developed and implemented PowerShell automation scripts for Test Failover processes, including 8-point network validations and SQL Server health checks.
- Provided support for incident management and operations within cloud environments.
- Designed and executed scalable infrastructure deployments on Azure, ensuring high availability and optimization of production services.
- Implemented Governance and FinOps strategies through the creation of custom Azure Policies and strict tagging schemes (e.g., "Environment" tag) for cost control
- Standardized processes by creating detailed technical documentation, significantly reducing knowledge transfer times within the team.
- Managed migrations and hybrid environments using Azure Migrate and Azure Site Recovery (ASR), following the Cloud Adoption Framework (CAF)

### Cloud Engineer

*ReadyMind*

May 2025 – October 2025

- Executed initial projects utilizing low-code tools and fundamental Microsoft Azure services.
- Managed core cloud resources and provided operational support for critical infrastructure during the technical specialization phase.
- Applied foundational cloud infrastructure concepts, operations, and best practices as a basis for Azure specialization.

## Education

---

### **Bachelor's Degree in Computer Science**

*UBA*

March 2023 – Present

## Skills

---

### **Technical Skills**

- Microsoft Azure, Azure Migrate, Terraform/Bicep, Azure DevOps, Github Actions, FinOps, Cloud Adoption Framework, PowerShell, Exchange Server, AWS, Docker, Git, GitHub, Java, Python, SQL.

### **Soft Skills**

- Teamwork, planning, communication, active listening, and adaptability.

### **Languages**

- Spanish (Native), English (Intermediate B1+).
